

Innovation in Walking.

If you find it hard to walk, because of sports injury, joint disease or degeneration, you need not wait to fix life's "little problems" to take advantage of the miracles done at St. Catherine.

All you need is talk to us.

We will diagnose your problem and help you with the most advanced and innovative medical treatments immediately.

That is because we are known not only for innovating medical procedures, but also for the care we give each and every one of our patients. That is why they come to us from all over the world for the FDA approved stem cell therapy procedure we excel in performing.

We use cutting-edge technology that gently processes your body's own fat tissue in order to, cushion and support areas of injury or damage as your body heals itself. The microfragmented fat is injected precisely into areas of the body in order to help support tissue healing and repair.

Innovators of this FDA approved stem cell therapy recognized the power in fat and developed a procedure that optimizes the use of fat to support your body's natural healing process. This cutting-edge procedure is gentle, convenient, easy to perform and improves your daily performance, even if you just have to walk your dog...

If you feel sluggish, limited in your daily activities, have pain in your joints, and are afraid of invasive procedures, we could be a good match. talk to us.

We are not that far, and we are welcoming your phone call, email inquiry, or visit while in Croatia.
